Subject: Status of Reports and Other items

I ran out of time to call you but am at work until 6:30 if you are available. Nothing is urgent so am putting in email to capture where we are.

Reports - Our review of the metals data for the batch of samples that contained HW47. This has been posted on the FTP site. I should have the last set of R3 report uploaded tomorrow morning for the first batch of samples (first week). I posted some more of R2 and tomorrow will do some more of R9. That will catch us up on the EPA reports. We are still waiting for Tier IV-type packages from contract labs on the glycols and ethylene glycol. Validation of micro results from first set is almost complete. I also posted the second set of metals data on FTP.

We sent an email to TechLaw about a field blank contaminant and have not heard back from them.

Some vials/containers are arriving broken but not impacting our ability to conduct analysis. Not sure if additional packing needed or label fragile - really it is amazing that given the amount of samples we haven't seen more issues with shipment.

We had one sample that was lost during extraction and we are using remaining sample from other containers to re-extract. If this doesn't work I'll let you know since that would impact SVOCs for that sample.

Stevie and I would like to talk to you about March sampling. We have a plan and would like to go over some items (or would you prefer that be handled thru TechLaw?).

We received some feedback from the project-level review that is very helpful. We'll respond to the report that was submitted and some areas are not going to be like "ESAT Validation." I might need your opinion on how much we change our report.

I am still working on the write-up - had to verify a few things. I did receive Humane's voicemail.
